

AMANO

AGP-0131/0132/0134
Single channel detector

AGP-0231/0232/0234
Dual channel detector

ADU-0100
Diagnostic unit

AGP SERIES VEHICLE DETECTOR SYSTEM

- **Single or dual channel**
 - **Ultra compact** size allows you to plug the unit directly into a DIN rail compatible socket
 - **Comprehensive** diagnostic capabilities
 - **Selectable permanent presence** eliminates premature gate/door closure and prevents potential vehicle damage
 - **Loop isolation protection** provides protection against lightning and transient damage and allows for operation with single point to ground sensor loops
 - **Loop frequency selection** eliminates possibility of crosstalk (interference) between adjacent loops/detectors
 - **Automatic sensitivity boost (ASB)** facilitates reliable detection of large truck-trailer combinations and high-bed vehicles
 - **Detect filter** provides finite turn-on delay, thus allowing small or fast-moving objects to pass over loop undetected
 - **A-B logic:** internal selection of A-B directional logic option for dual channel detector
 - **Diagnostic unit** features continuous diagnostics data transmission and immediate display of operating conditions
-
