General

IDC80 is a very thin, truly credit card thickness (0.8mm) of contactless proximity card and it has very flat surface to apply any photo ID on both sides of card.

IDC80 is pre-programmed at the factory with IDTECK's unique encryption code and it has very flexible data format to meet any customer's requirement and any OEM format up to 64 bit ID is also available. It can be supplied without code and customer can write their unique code by using STAR PGM1000 Programming Devices with Programming software .

IDC80 has 2 punch hole marks on the back side and can also be slot punched either vertically or horizontally and also available with a Magnetic Stripe and smart chip for use with other systems.
