

ROCOL PACERS

ROCOL

THE MODULAR, HEAVY-DUTY

SPEED CHECK SYSTEM

CONTROL TRAFFIC. STOP WORRYING ABOUT PEDESTRIAN SAFETY.

ROCOL PACERS are a uniquely engineered solution to traffic control that can be used wherever vehicles and people cross paths or where safety requires reduced traffic speed. The advantages of the Pacer system compared with traditional speed bumps are:

- Pacer sections are made of a hard, high-impact rubber, that lasts longer than plastic, asphalt or concrete speed bumps. They're designed for use by cars or HGV's.
- Pacers are movable. You can easily relocate them as required.
- Pacers are modular. They can be adjusted to the length required.
- Pacers are highly visible day or night. In daylight, the yellow and black sections are conspicuous. At night, built-in cats eyes on each Pacer section catch a driver's attention.
- Pacers are grooved to provide traction in rain or snow and easy drainage of water.
