

# EAGLE STEPPER ST-70

## Introduction :

The Eagle Stepper System has been successfully utilised worldwide as a speed deterrent for over 10 years. It is also a uniquely engineered solution to traffic control that can be used wherever vehicles and peoples cross paths or where safety requires reduced traffic speed. It's unique construction utilising hard, high impact virgin rubber guarantees an extremely durable product that has been tested with loads of up to 40 tonnes. The Stepper System is ideal for areas of intense, heavy traffic such as manufacturing sites, large retail parks and hospitals.

## Special Features :

- \* Modular construction which provides for easy installation and relocation to suit individual site requirements.
- \* Yellow and black rubber sections providing a highly visible speed deterrent.
- \* Integrated red and green cats eyes which provide maximum visibility for the ramps at night and allow night time directional traffic flow.
- \* A grooved surface assisting traction in wet and icy conditions.
- \* An opening for a steel pole to align the modules, which can be substituted for cables and hoses in temporary applications.
- \* Endcaps which allow for the safe passage of fork lift trucks and bicycles.
- \* Dimensions of 400mm x 250mm x 70mm with a speed reduction to 5-10mph.
